

GRACE SUBSTATION

GRACE SUBSTATION

Project Location:

Grace City, Idaho

Project Description:

This project was a Boundary and Topographical Survey of the Grace Substation in Grace City, Idaho. The work was done in preparation for an expansion project for the substation. The survey area was approximately one acre in size. Rural boundary surveys like this one are always challenging. The research and field reconnaissance are tedious and time consuming tasks, however these surveys are certainly one of key strengths of our survey team. We enjoy working through the difficulties and we are proud of the product that we produce.
