

LIMA SUBSTATION

LIMA SUBSTATION

Project Location:

Lincoln County, Wyoming

Project Description:

This project was a Topographical Survey to be used in the design of the new Lima Substation in Lincoln County, Wyoming. The survey area was approximately 10 acres in size. The work included the survey of existing power lines, utilities, roadways and other topographical features on and adjacent to the site. Power line heights were surveyed and identified on the drawings. Our crew provided a 30 foot survey grid across the entire site for the purpose of developing an accurate contour map representation of the topography. Our work was delivered to the client on time and under budget.
