

POWERDALE SUBSTATION

POWERDALE SUBSTATION

Project Location:
Hood River, Oregon

Project Description:

This project was a Topographical Survey of the existing Powerdale Substation in Hood River, Oregon. The client intends to reconstruct the entire substation and many of the existing overhead powerlines in the area. We experienced extremely steep slopes and thick vegetation on this project. We utilized GPS units as well as conventional total stations to collect the field data on this site. In spite of the challenges experienced on this project we effectively delivered the project on time and under budget.
